# **Список таблиц**

# **1 Цель работы**

Получение навыков правильной работы с репозиториями git.

## 2 Теоретические сведения

- Gitflow Workflow опубликована и популяризована Винсентом Дриссеном.
- Gitflow Workflow предполагает выстраивание строгой модели ветвления с учётом выпуска проекта.
- Данная модель отлично подходит для организации рабочего процесса на основе релизов.
- Работа по модели Gitflow включает создание отдельной ветки для исправлений ошибок в рабочей среде.
- Последовательность действий при работе по модели Gitflow:
  - Из ветки master создаётся ветка develop.
  - Из ветки develop создаётся ветка release.
  - Из ветки develop создаются ветки feature.
  - Когда работа над веткой feature завершена, она слиивается с веткой develop.
  - Когда работа над веткой релиза release завершена, она слиивается в ветки develop и master.
  - Если в master обнаружена проблема, из master создаётся ветка hotfix.

- Когда работа над веткой исправления hotfix завершена, она сливаются в ветки develop и master.

# **3 Выполнение лабораторной работы**

## **3.1 Работа с тестовым репозиторием**

Для работы с Node.js добавим каталог с исполняемыми файлами, устанавливаемыми yarn, в переменную PATH.

```
regenmammedov@regenmammedov:~$ pnpm setup
Appended new lines to /home/regenmammedov/.bashrc

Next configuration changes were made:
export PNPM_HOME="/home/regenmammedov/.local/share/pnpm"
case ":$PATH:" in
  *":$PNPM_HOME:*") ;;
  *) export PATH="$PNPM_HOME:$PATH" ;;
esac

To start using pnpm, run:
source /home/regenmammedov/.bashrc
regenmammedov@regenmammedov:~$ source ~/.bashrc
regenmammedov@regenmammedov:~$
```

Рисунок 3.1: Node.js

Программа commitizen используется для помощи в форматировании коммитов. При этом устанавливается скрипт git-cz, который мы и будем использовать для коммитов.

```
regenmammedov@regenmammedov:~$ pnpm add -g commitizen

Update available! 10.27.0 → 10.29.3.
Changelog: https://pnpm.io/v/10.29.3
To update, run: pnpm self-update

Программа standard-changelog используется для помощи в создании логов.

Делаем первый коммит и выкладываем на github.

Необходимо заполнить несколько параметров пакета.

Таким образом, файл package.json приобретает вид:

The screenshot shows a code editor window with the title bar "package.json" and the path "~/git-extended". The editor displays the following JSON code:

```
1 {
  2   "name": "git-extended",
  3   "version": "1.0.0",
  4   "description": "Git repo for educational purposes",

Добавим новые файлы.

Выполним коммит.

Отправим на github.

Создадим ветку для новой функциональности По окончании разработки новой функциональности следующим шагом следует объединить ветку feature\_branch с develop:

```
regenmammedov@regenmammedov:~/git-extended$ git flow feature start feature_branch
Switched to a new branch 'feature/feature_branch'
```

Summary of actions:

- A new branch 'feature/feature\_branch' was created, based on 'develop'
- You are now on branch 'feature/feature\_branch'

Now, start committing on your feature. When done, use:

```
git flow feature finish feature_branch
```

```
regenmammedov@regenmammedov:~/git-extended$ touch test2
regenmammedov@regenmammedov:~/git-extended$ git flow feature finish feature_branch
Switched to branch 'develop'
Your branch is up to date with 'origin/develop'.
Already up to date.
Deleted branch feature/feature_branch (was 878b86d).
```

Summary of actions:

- The feature branch 'feature/feature\_branch' was merged into 'develop'
- Feature branch 'feature/feature\_branch' has been locally deleted
- You are now on branch 'develop'
